

eXhibition:editor3D

The 3D tool for design, presentation & education

The third dimension for museums and exhibitions

Cultural institutions such as museums, galleries, archives and libraries are increasingly using digital content to present their collections to a wider audience. The eXhibition:editor3D now gives curators and exhibition designers the opportunity to visualise objects and information in three-dimensional form.

The innovative planning and design tool, developed in close cooperation with the Vienna Technical Museum, is tailored to the needs of modern cultural institutions. A special focus was placed on usability: exhibits and multimedia objects can be arranged in three-dimensional space by simple drag&drop, creating virtual exhibitions and tours with a click of the mouse.

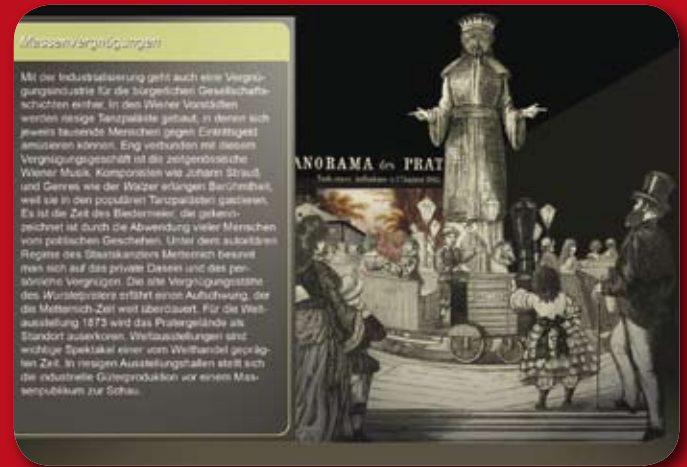

Applications of the eXhibition:editor3D range from targeted exhibition planning to the design of three-dimensional presentations and virtual exhibitions for multimedia stations or websites.

Layout concept

3D synthesis

Intuitive work

- Create exhibitions by drag&drop
- No technical knowledge required
- Tailored to user needs

Individual results

- Layout and appearance of the presentation can be adapted
- Interactive objects breathe life into your exhibition
- Predefined routes guide the visitor through the exhibition

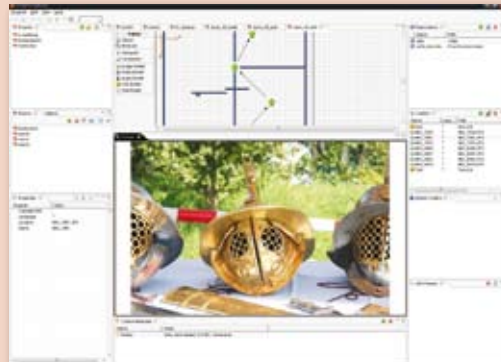

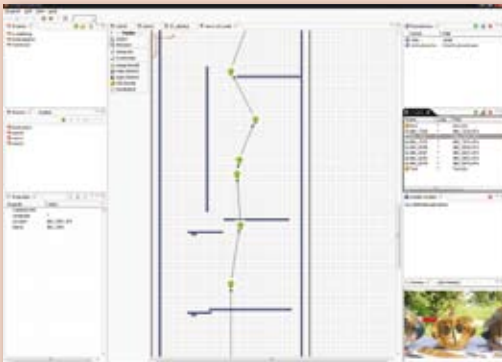

Multimedia integration

- Video, music and sounds
- Voice recordings provide background information
- 3D objects enhance the experience

Exhibition design

You can place images of your objects in virtual space to test the ideal sequence and arrangement of the exhibits. By simulating the viewer's perspective when approaching an exhibit, the program allows you to realistically evaluate the optimal layout of your exhibition already at the planning stage.

Intuitive design with
real-world simulation

Presentations

Create exciting presentations using three-dimensional graphics. Product presentations may include text, audio and films, or even interactive 3D objects. Sounds and animations will capture the imagination and interest of your audience.

3D presentation with multimedia elements

Virtual exhibitions
